Pigmentary Uveitis
Dr. Wendy Townsend
Friday, August 17th, 2012 7:00 pm
Tails-U-Win, Manchester, CT

On Friday, August 17th, 2012, CT River Valley GRC & Southern Berkshire GRC, will jointly present a program on Pigmentary Uveitis by Dr. Wendy Townsend of Purdue University. Dr. Townsend is a leading researcher on PU and has graciously accepted our invitation to discuss this Golden Retriever disease. The program will include an examination and blood draw for Goldens age 12 and over, affected or not, to assist in development of a DNA test.

Program topics will include diagnosis, treatment, and research and will last about one hour. The discussion will include:

1.) Current therapies for GRU
2.) Therapy goals
3.) What do we know about how GRU is inherited?
4.) Significance of iris cysts
5.) How old is old enough to be considered safe from development of GRU?
6.) What kind of research is currently being done
7.) What have we figured out so far

We wish to acknowledge Canine Health Events and especially Gayle Watkins, for helping to bring Dr. Townsend to Connecticut for this very worthwhile program. Our hope is that participation in her research will make a difference in finding a cure for this disease.

This free program will take place at Tails-U-Win, 175 Adams St, Manchester, CT at 7:00 P.M.
